**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Gafert (US 4,338,002).

Regarding claims 1-3 and 6, Gafert teaches a method for measuring behavior of the head and eyes of a spectacle wearer looking at a target, comprising in the steps of:

- providing a target and equipping the spectacle wearer with a lens having at least two regions, a view of the target through one region of the lens being different from a view of the target through an adjacent region of the lens; - when the spectacle wearer looks at the target, determining the region of the lens through which the spectacle wearer sees the target depending on how the spectacle wearer perceives the target, and - calculating the spectacle wearer's head and eye movement as a function of the region determined-see col. 5.

Claims 1-3, 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Blum et al (US 2002/0140899).

Regarding claims 1, 2,5,6,10,12 Blum discloses electro optics for measuring the behavior of the head and eyes of a spectacle wearer-see sections 185-208.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8, 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blum et al.

Regarding claims 8-9, Blum teaches the lens can have different properties in adjacent regions or regions separated from each. Thus, it would have been obvious to one of ordinary skill in the art to include a region that is black band or different colors, to aid the user in distinguishing the different optical regions/effects, as well as the doctor during examination of the user.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kerns (US 2002/0005932) discloses eyeglasses with multiple optical zones.
